Rx only	Prescription only
CE 1639	CE Marking
$\wedge$	Caution
Ĩ	Consult Instructions for Use

The prescription use statement as required by 21 CFR 801.109(b)(1)

"Caution: Federal Law restricts this device to sale by or the order of a physician or any other practitioners licensed by the law of the state in which that person practices to use or order the use of the device."

Unique Device Identification (UDI)

#### Cyber Security

Before installing the EzDent-i you must follow the instructions below for cyber security.

The instructions help to protect the program against cyber security threats such as viruses and malware.

- Prior to installing and using EzDent-i, scan your computer system with anti-virus and antispyware programs from a trusted source.
- Install, set up and enable adequate anti-virus software.
- Maintain up-to-date anti-virus software.
- Make sure that your OS has the latest security updates applied.
- Turn on your PC's firewall.
- Windows Vista, 7, 8 or higher has a built-in firewall that is turned on by default.

If you have any cyber-security-related concern or problem, please contact our customer support on the phone or via e-mail at the contacts listed below:

- Tel.: +82-1588-9510
- E-mail: gcs@vatech.co.kr
- Website: <u>http://www.ewoosoft.com/</u>

# Main Features of EzDent-i

EzDent-i is a dental imaging software solution that stores, analyzes and helps in the process of diagnosing patient images that have been acquired through VATECH dental equipment.

- Manage Patient Information
- Capture and store intraoral X-ray images.
- Provide tools for image processing and View function for Patient image view
- Process images to enhance their diagnostic value with dental-specific tools and consultation animations.
- Create a record with patient images in Report Mode.

EzDent-i can be used in a networked environment. If EzDent-i is installed in several computers, the patient and image database can be shared among them and used on different workstations.

#### Indications for Use

EzDent-i is a dental imaging software that is intended to provide diagnostic tools for maxillofacial radiographic imaging. These tools are available to view and interpret a series of DICOM compliant dental radiology images and are meant to be used by trained medical professionals such as radiologist and dentist.

EzDent-i is intended for use as software to acquire, view, save 2D image files, and load DICOM project files from panorama, cephalometric, and intra-oral imaging equipment.

It is highly recommended to restart the PC to apply system changes resulted from the installation.

# 4. Updating EzDent-i

# 4.1 Updating EzServer

The following section describes the update process for EzDent-i Server.

To update, double click and open the provided executable files.

 To update DB (Database) or File Server, Open EzServer.exe relevant with operation type of PC.

• To update Consult Data, open ConsultData.exe.

To update ImplantDB, open ImplantDB.exe.

# ImplantDB.exe

For the more information in details, please contact to Customer Support Center of VATECH.

\_\_\_\_\_

# 4.2 Updating EzDent-i

To update EzDent-i in a client or console PC, execute the EzDent-i.exe. Follow the installation method for the subsequent steps.

# 5. Uninstalling EzDent-i

To uninstall EzDent-i:

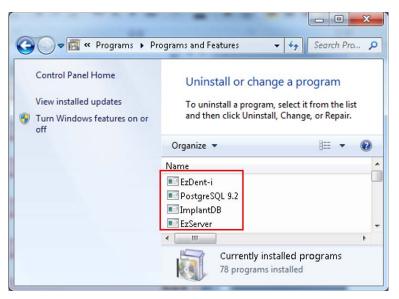

- 1. Click the Start button on the following window.
- 2. Click [All Programs] and then click [Control Panel]. Click [Uninstall a program].

#### Programs

#### Uninstall a program

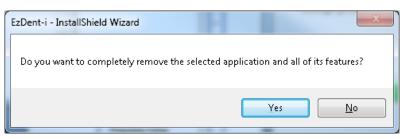

3. User can verify the programs related with EzDent-i such as EzDent-i, PostSQL 9.2, Implant DB, EzServer and ConsultData. Double click one by one and uninstall the programs.

4. First, Double click EzDent-i and then select [Yes] button to proceed to uninstall.

🗾 EzDent-i

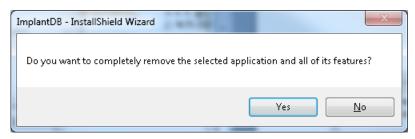

5. When the message appears to verify if user wants to delete the program or not, click the [Yes] button.

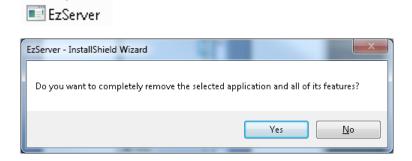

- 6. When EzDent-i uninstallation is completed, click the [Finish] button.
- To continue uninstalling EzDent-i, go back to [Uninstall Program] and Double click ImplantDB

8. Select the [Yes] button to proceed to uninstall.

- 9. When ImplantDB uninstallation is completed, click the [OK] button.
- **10.** To continue uninstalling EzDent-i, go back to [Uninstall Program] and Double click EzServer and then, select the [Yes] button to proceed to uninstall.

- 11. When EzServer uninstallation is completed, click the [Finish] button.
- **12.** To continue uninstalling EzDent-i, go back to [Uninstall Program] and Double click ConsultData.

Consult Data

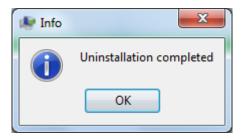

- 13. Select the [Yes] button to proceed to uninstall.
- 14. When ConsultData uninstallation is completed, click the [Finish] button.
- **15.** To continue uninstalling EzDent-i, go back to [Uninstall Program] and Double click PostgresSQL 9.2.

PostgreSQL 9.2

16. Select the [Yes] button to proceed to uninstall.

🧶 Quest	tion
?	Do you want to uninstall PostgreSQL and all of its modules?
	Yes <u>N</u> o

17. When PostgresSQL 9.2 uninstallation is completed, click the [OK] button.

- **18.** When Consult Data uninstallation is completed, click the [Finish] button. Once the programs such as EzDent-i Client, Implant DB, Consult Data, EzServer, PostgreSQL 9.2, are uninstalled, EzDent-i is completely uninstalled.
- **19.** After uninstalling EzDent-i, it is highly recommended to restart the PC.

# 6. License Activation

To use EzDent-i normally, activate the license. To activate the license, three options are given.

Dongle Key User (Regular User)

```
    I will activate my license with USB Dongle Key.
    (For regular users)
```

 $\rightarrow$  Select the dongle key option for successful authentication of the EzDent-i product. The Internet connection is not required when using the USB dongle key.

License Key User (Regular / Demo User)

I will activate my license with License Key.
 (For regular or demo users)

 $\rightarrow$  Select the license key option to authenticate the EzDent-i product or its demos. It can be used only where an internet connection is available.

Trial Version User (Trial User)

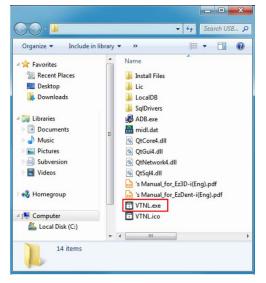

```
    I will try this software.
    (For Trial Users : days left until it expires(30))
```

 $\rightarrow$  If you do not have either one of these two keys, select the trial option to test the EzDent-i product for 30 days. It can be used where an internet connection is not possible.

Refer to the following sections to activate the three license options above.

#### 6.1 For Regular Users: Activating License with a USB Dongle Key

1. Connect the USB Dongle Key to the PC, and open VTNL.exe

 To open VTNL program, install ADB.exe file first. If the executable file is not installed, the installation process of ADB program will automatically start when opening VTNL program.

## 8. Consult Database License Activation

To use the animated contents under the Consult tab, you must activate your consult database with license. There are three methods to activate the license.

Dongle Key User (Regular User)

I will activate my license with USB Dongle Key.
 (For regular users)

 $\rightarrow$  Select the dongle key option for successful authentication of the Consult database. The Internet connection is not required when using the USB dongle key.

License Key User (Regular or Demo User)

I will activate my license with License Key.
 (For regular or demo users)

 $\rightarrow$  Select the license key option to authenticate the Consult database demos. It can be used only where an internet connection is available.

Trial Version User (Trial User)

I will try this software.
 (For Trial Users : days left until it expires(30))

 $\rightarrow$  If you do not have either one of these two keys, select the trial option to test the Consult database for 30 days. It can be used where an internet connection is not possible.

- If you have a license, you are able to use all contents. But if you do not register the license, only the contents that the user adds to the DB are available.
- Trial version users are able to use all contents for 30 days. After 30 days, only the contents that the user adds to the DB are available.

Refer to the following sections to activate the three license options above.

## 8.1 For Regular Users: Activating License with a USB Dongle Key

- 1. Open MultiInstallUtility.exe while VTNL is running.
- 📑 MultiInstallUtility.exe
- 2. Select Consult License Activator and click [Start] button.

- This window appears every time you run EzDent-i until the required information is filled.

## 2. Getting Access to Settings

In Settings, users can edit different features of EzDent-i. Click the main menu and select [Setting] from the list. The Settings window will appear. This chapter explains about each setting in detail.

	SETTINGS					
	Environment	General	Database	Patient	Linkage/E-Mail	Practice Information

	None	Update N	low		Manag	er		
Report								
Service								
Others								
			_	_			_	
Initialize Setting	s				ОК	Cancel		

1. Settings Location

Decide whether to set up the EzDent-i on the network server or locally. To be the same as the server, EzDent-i should reflect any changes in the server database in real time.

On the other hand, if the setup is done locally and not linked to the server, it cannot receive data from the server machine. Therefore, the database must be synchronized with the server on a regular basis by clicking the [Sync Settings] button.

2. GENERAL

User can change the setting for the language, teeth code, date format, dose unit, and font.

Language

Select the language of EzDent-i. EzDent-i supports 16 different languages including Korean and English. After setting the language, restart EzDent-i.

		Some fonts may not be available for certain languages.
	•	The date format is automatically set depending on the selected language.

Font

Select the font type used in EzDent-i. Tahoma is recommended in EzDent-i.

Tooth Code

Select a tooth numbering system. The types of each tooth numbering system are below.

Tooth Numbering of FDI(Federation Dentaire Internationale) System

17 🕌 16 🔔 15 🔪	14		21	23	<sup>25</sup> 👃 <sup>26</sup> 🧶 <sup>27</sup> 🐰
47 🞢 46 🎢 45 🍸	44 🍞 43 🦻	42 7 41 7	31 7 32 7	33 🔪 34 🦹	35 🔨 36 🏹 37 🏹

• Tooth Numbering of Universal System

2 2 3 2 4	5	<sup>6</sup> 👌 🕇	8	9			12	13	<sup>14</sup> 🥂 15 🐰
31 📝 30 🎢 29 🍸	28 /	27 🌶 26 🔰	25	24	23	22	21	20 🥄	19 📢 18 🌾

Dose Unit

Select a dose unit of notation. (Dose unit: mGym<sup>2</sup>, Gycm<sup>2</sup>, dGycm<sup>2</sup>, uGym<sup>2</sup>, mGycm<sup>2</sup>)

- 3. PROGRAM UPDATE
- User can select the option whether EzDent-i will be updated automatically or manually.
- In case of [Auto], EzDent-i is updated automatically to the latest version of EzDent-i by VTPatchManager.
- In case of [Manual], EzDent-i is updated when user click the [Update Now] button. If User doesn't want to update EzDent-i, set this to [None].
- 4. USER ACCOUNT MANAGER

Log in with the admin account to add, modify, or delete the user accounts. The user accounts are managed under the [Settings > Environment > General > USER ACCOUNT MANAGER] option.

Restrictions on Authority by Account Types

Depending on the type of user accounts, restrictions on authority apply as below.

Account	Restrictions on Authority
Master Admin	None
Admin	None
Doctor	User Account Manager, Delete Data, Edit Consult Contents
Staff	User Account Manager, Delete Data, Transfer Data, Edit Consult Contents

- When registering a patient, you can assign an ID with the doctor account to the patient as the doctor in charge.
- If a doctor ID has been changed, the doctor ID saved in the patient information also changes.
- If a doctor ID is deleted, the doctor ID saved in the patient information is also deleted.

- When you assign 2 doctor IDs to the patient information and deleted one of them, the other ID remains on the patient information.
- Login/ Logout Option

When using the login option, you must enter the password to run the EzDent-i program.

In LOGIN	×
ID Master Admin Password	)
OK Cancel	

The logout option is only activated when you are using the login option. After the set logout time has passed, the program is automatically logged out.

Password Setting

EzDent-i requires password to delete the contents or the registered patients. The initial password is numbers 0000. Password must be at least 10 characters in length and contain at least one upper case, lower case, numeric character, and special character (excluding wihtespace). Users can change the password policy in EzServer settings. Users can set the password expiration in EzServer settings. The default value of expiration date is set to 180 days.

- Users may change the EzServer settings as below.
   Enter <u>http://localhost:43112/settings</u> into the address bar of the Internet to set the file server and DB server. (<u>http://localhost:55005/settings</u> for EzServer less than v4.0)
  - Go to Other Setting in the Server Control Panel and click [Open in Browser] button to access to the sever setting window.

Entering incorrect password for 10 times will deactivate the account. To reactivate the account, reset the password using Master Admin or contact Customer Support Center.

## 3.2 Database

Initialize Set	tings			ОК	Cancel

#### 1. CHART NUMBERING

Determine whether a chart number is to be generated automatically or entered manually during patient registration. Check the box for a number to be generated and entered automatically.

#### 2. PATINET NAME OPTION

Specify the patient name format.

- 3. RECENT PATIENTS LIST
- [Default List View]: Set how to list the patient in the Patient List when launching the program. You can set to list patient by the acquisition date or viewed date.
- [Automatically Show Patient Images]: When enabling the [Automatically Show Patient Images] option, the images of a selected patient are displayed on the right pane automatically after launching the program. When disabling the [Automatically Show Patient Image] option, the images of a selected patient are not displayed automatically, and users should double click the patient to display the images.

## 3.4 Linkage/E-mail

	General	Database	Patient	Linkage/E-Mail	Practice Information
	LINKAGE

ervice	Password	Name	Port	S	ecurity
			25		Auto 🔻
				Test	
Others				itat	

Set up the 3D Viewer integration and Email setting.

- 1. LINKAGE
- When double clicking a 3D image, the patient image appears in 3D through a 3D viewer that is already linked. The user can select a 3D viewer to display a 3D image.
- EzDent-i is linked with Ez3D-i, VATECH's 3D Imaging Viewer. In case that Ez3D-i is installed, Ez3D-i is opened when a user selects a CT image in VIEWER Tab. If another 3D Imaging Viewer is linked, set the location of its exe. file.
- If the user needs to use multiple 3D Viewers, specify the path at Second/Third 3D viewer area in the subsequent fields.
- Click and select the check box of [Use] for the [Grouping of 3D Orthodontic Data] option to group the 3D orthodontic data.
- Analysis Program (Ceph Analysis Software)
   EzDent-i can be linked with a 2D Cephalometric Program. The three programs which can be linked with EzDent-i are EzOrtho, OrthoVision or V-Ceph. Set the location of program of 2D Cephalometric Program in this field.
- If the [Data Group] option is set to [Use], you can group and use the 3D orthodontic data. (There should be saved CT images for data grouping.)
- 2. E-MAIL SENDER INFORMATION

When sending a patient image or a report through email, enter the information of the sender. Enter the E-mail address and the password for that account, then enter the name of the sender in the Name field. Test the email link by clicking the [Test] button.

- The following information will be automatically filled when the user is using the domain that is predefined by EzDent-i (Gmail, Yahoo, Daum, Hanmail, Naver, Hotmail, AOL, Nate, Outlook)
  - SMTP Server Address, Port, Security

 After inputting email information, click the [Test] button to check if it operates normally.

### 3.5 Practice Information

#### 1. PRACTICE INFORMATION

Enter the clinic information. On the REPORT tab, the clinic information is displayed in the header or footer.

#### 2. PRACTICE LOGO

Once you input the text and upload the clinic logo image, it appears in the bottom left of the EzDent-i screen. For the text, it appear as the name of the clinic, and for the logo image, the uploaded image will be automatically adjusted to the ratio of 200x45. The registered logo will be used in the reports as an advertisement.

You can use PNG, JPG, BMP, TIFF format for the loge image. Regardless of the uploaded image size, it will be automatically adjusted to the ratio of 200x45.

1. SAVE OPTION

Determine whether images captured with IO sensor or IO camera will be saved in the database automatically or manually.

For the manual setting, click the [Capture] button to acquire images. Select the images desired among the acquired images and click the [Save to DB] button and store the images in the database.

For the Auto DB Save setting, click the [Capture] button to save all acquired images in the database. For this reason, the Acquisition tab appears differently during image acquisition.

#### 2. IO SENSOR OPTIONS

When the image resolution is set to [High Resolution], the image acquired with equipment that supports high resolution will be saved in high resolution mode, but this [High Resolution] option will not affect the resolution of the images that are acquired with other general equipment.

#### 3. IO CAMERA CAPTURE KEY

Set the Keyboard key which can be used as the capture key for your IO Camera.

#### 4. CALIBRATION (Image Length Adjustment)

The set calibrated values can be automatically applied to the Panorama, Cephalo or IO Sensor images that are not calibrated. To apply the calibrated value, click the check boxes to show the checkmark.

### 4.2 Console Program

Input the path of the Console S/W that you're using for image acquisition. To synchronize the image acquisition program with EzDent-i, information should be entered as shown below.

SETTINGS							×
	General	Console Program	Direc	tory	SmartPay	·

- 1. CONSOLE PROGRAM
- Sync Capture Settings with Console Program

If this option is checked, it reflects console program's settings including the Console Program Path, Capture Message, Patient Information File Path and Output File Path automatically.

The auto sync function is not supported when no or non-compatible version of console program is installed. In that case, the user needs to enter the following items manually.

Console Program Path

Enter the location of executable file. When the image acquisition program is set as default, the location should be 'C:/VCaptureSW/exe/VCaptureSW.exe'

Capture Message

When an image is acquired it sends a message. In case of the image acquisition program, input 'Captured' in the [Capture Message] field.

Patient Information File Path

In case of the image acquisition program, 'C:/VCaptureSW/exe/PatientInfo.ini' path should be entered

Output File Path

In case of the image acquisition program, 'C:/VCaptureSW/Output.ini' should be entered.

2. DISPLAY ACQUISITION BUTTON

Disable or enable the acquisition buttons inculing CT, Panorama, Cephalo and Others on the Acquisition Tab.

3. IO SCANNER PROGRAM

Enter the location of executable file. When the IO scanner program is set as default, the location should be 'C:/I-Scan A/Ez-iScan x64/Ez-iScan.exe'.

Capture Message

When an image is acquired it sends a message. In case of the IO scanner program, input 'Ez-iScan Captured ' in the [Capture Message] field.

Patient Information File Path

In case of the IO scanner program, 'C:/I-Scan A/Exchanging/PatientInfo.ini' path should be entered

Output File Path

In case of the IO scanner program, 'C:/I-Scan A/Exchanging/Output.xml' should be entered.

The recent changes on file path or filename of the console program may not be reflected in this manual.

## 4.3 Directory

1. Privacy Policy Setting

Set whether privacy policy function is used or not. Only when this field is set to [Use], the fields below are activated.

2. Anonymize Information Displayed on Screen

Select which patient information is to be anonymized on the screen.

Only the selected items will be displayed will be replaced with asterixes("\*")

Note: This does not affect the user's input when searching for patients or adding/editing patient information.

3. Anonymize Patient Information

Users may choose to anonymize patient information when using any of the following functions. EzDent-i does not provide users with the ability to anonymize specific user information.

If the function is not selected, EzDent-i will not display the option to anonymize patient information in the user interface.

## 11. Initialize Settings

To set the Settings of EzDent-i back to the initial state, users can click the [Initialize Settings] button. Other than the items in the Database tab, all settings will be back to initial values. Thus, users should be careful before clicking the [Initialize Settings] button.

# Chapter 3. EzDent-i Basics

1. Starting EzDent-i	75
2. Exiting EzDent-i	76
3. EzDent-i Main Menu	77
4. EzDent-i Help	86

### 1. Starting EzDent-i

1. Double click the EzDent-i icon on the desktop. The launching window appears and EzDent-i is opened.

2. EzDent-i is opened and the first screen appears.

Main Menu EzDrici			арона – з к арона – закака / 2 холого димии Дове Зан

3. To run EzDent-i normally, EzServer must be running on the Server PC.

The operation of EzServer can be checked from the Tray icons in the lower-right corner of the desktop.

If any error message related with VTFileManager appears, check if VTFileManager is on.

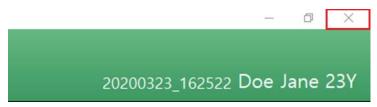

EzWebServer Service is OFF

Right click on the tray icon to open Server Control Panel or to turn on/off EzWebServer Service.

## 2. Exiting EzDent-i

To exit EzDent-i, click the Exit button in the upper right corner of the EzDent-i screen.

### 3. EzDent-i Main Menu

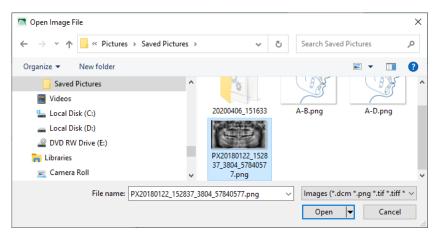

Through the main menu, users can easily manage saved images for Open, Export or applying image processing. Also, Settings that will be applied to EzDent-i can be controlled through the main menu. To verify the detailed features of the main button, click the main button, then, the list appears.

EzDent-i		
Main Menu EzDent-i	PATIENT ACC	Main Menu EzDent-i
SEARCH  Search +  RECENT PATIENTS LIST  Recently Acquired  Recently Viewed		Open Export Export CT File Export to 3rd party Analysis File Information Settings

#### 3.1 Open

Users can open images saved in the local PC by selecting Open from the main menu button.

1. On the VIEWER tab, click the main menu button and select [Open] to open an image on EzDent-i. When [Open Image File] window appears, select an image that will be opened in VIEWER tab.

2. The open image is displayed in the Workspace.

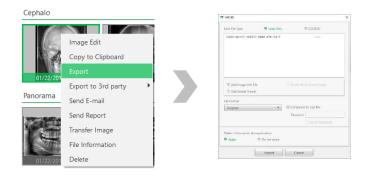

#### 3.2 Export

Users can export images saved in EzDent-i to their local PC or CD/DVD.

- 1. Click the main menu button and the click the [Export] menu or click [Export] icon(
- You can also export images to export from PATIENT tab by right-clicking on the image and selecting the [Export] option.

It is possible to select multiple images by holding the Ctrl key on the keyboard and clicking the desired images and export them.

- If you export multiple images at the same time, all images will be saved into the same file format such as BMP, JPG, PNG and TIF as well as the original file format.
  - 2. When the [EXPORT] window appears, click and select the file type.

- Save File Type
  - [Local Disk] option allows for the images to be exported to the local PC.
  - [CD/DVD] option is available to export the image onto a CD by burning the images.
- Other Options
  - [Add Simple Viewer] option is to export image with the patient information.
  - [Add Image Info File] option is to export image as well as export image information to text (.txt) files.
  - [Add Multi-Frame Image] option is to export data including multi-frame image.
- Checking [Compress to .zip file] allows you to [Export] all files (images, patient information) as a compressed file (.zip).
  - put a password during the [Export] process to password-protect the exported file.
  - Password can be entered up to 12 digits.

Users can either save CT file to local disk or export to CD/DVDs.

**3.** Checking [create zip file] allows you to [Export] all files (images, patient information) as a compressed file (.zip).

Input a password during the [Export] process to password-protect the exported file.

Password can be entered up to 12 digits.

#### 3.4 Analysis

To open a cephalometric analysis program such as EzOrtho, OrthoVision or V-Ceph, select the Analysis in VIEWER Tab. If the Analysis program is installed and linked in Settings, it will run automatically.

In order to link the Analysis Program, refer to the '2. EzDent-i Set Up  $\rightarrow$  2. Environment  $\rightarrow$  Linkage/E-Mail'.

#### 3.5 File Information

When users need to verify the image information of patient image, FILE INFORMATION option can be selected through the main menu.

1. In PATIENT tab, click the image on image which needs to be verified.

- 2. Select [File Information]
- Right click on the image and select File Information to arrive at the same window.

## 4. EzDent-i Help

?

The help document provides detailed information on how to use EzDent-i.

1. Click the [Help] icon on the toolbar to view the help document.

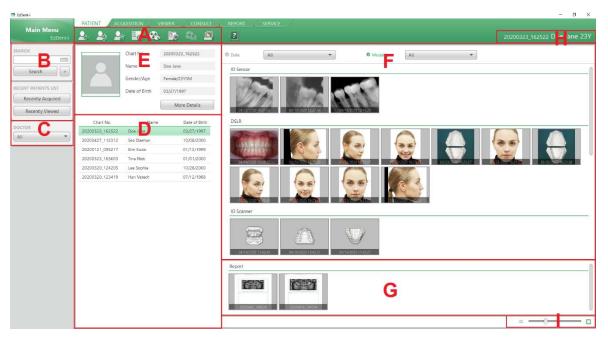

# Chapter 4. PATIENT Tab

1. Configuring PATIENT Tab	89
2. Patient Searching	90
3. Editing Patient Info	93
4. Exporting to Acquisition Information	96
5. Exporting Patient Information	98
6. Export	99
7. Data Group	100
8. Classifying Images of Registered Patients	102
9. Tools	106

### 1. Configuring PATIENT Tab

This is a tab for patient management. From here, Users are able to manage a patient's information and images.

#### 1.1 Workspace

A: These Buttons are for adding, modifying and deleting patient information.

- B: SEARCH pane is used for searching for a patient or sorting patients by acquisition date or searched date.
- C: When registering patients, the patients who are assigned to the currently selected doctor are listed.
- D: When the [Search] button is clicked in the B, the search results are listed.
- E: The detailed information of the selected patient is displayed.
- F: The images of the selected patient are displayed.
- G: The reports of the selected patient are displayed.
- H: The chart number, name, and age of the selected patient are displayed
- I: User can adjust the size of the searched image through the thumbnail slider at the bottom right of the viewer window.

### 2. Patient Searching

### 2.1 Searching for Registered Patient

1. Enter the name or chart number of the patient in the Patient Search window and click the [Search] button or press the Enter key. The search results appear.

Main Menu EzDent-I	PATIENT ACQUISITION VIEWER CONSULT REPORT	ERVICE
SEARCH Search + RECENT PATIENTS LIST Recently Acquired Recently Viewed	Chart No. 20200323 143522 © Date Name Deckine Consort Gender/Age Fense(2315M Date of Birth 03,027,1997 More Details	All  Moselity All
DOCTOR All	Chairt No.         Name         Date of Birth         DSLR           20200323_162522         Diek Jame         05/27/1997         05/27/1997           20200427_112312         Seo Dietham         10/08/2000         05/08/2000	

 Click the keyboard icon in the search box and the on-screen keyboard appears. Use the on-screen keyboard for searching a patient quickly and easily.

SEARCH	
[]	n by ALL Ber – Den Den Gen, fan Sen fan Jan (an fan fan fan fan fan fan fan fan fan f

- Type the initials of saved name to search for patients. (Ex: Type "A, H" in the Search window for Audrey Hepburn)
- 2. Click the patient in the search result list to view the detail information about the patient.

#### 2.2 Advanced Patient Searching

The advanced search can result more comprehensive search outcomes through the combination of searching by imaging mode and by date.

1. Click the [+] button on the right side of [Search] button. The [SEARCH FOR PATIENT] window appears.

	SEARCH FOR PATIENT	>
	Select Modality Select Dat	e
	All Modalities	Today
SEARCH	Panorama Ye	esterday
	Cephalo	3 Days
	CT Lá	ast Week
Search +	IO Sensor La	st Month
	IO Camera	User
	Others A	II Dates
	Search Cano	:el

- 2. Select the desired condition for searching and click the [Search] button. The results meeting the search conditions appear.
- **3.** When selecting the patient, the patient information will change to the selected patient in the current tab.

#### 2.3 Viewing Recent Patient List

The patient list can be sorted by the acquisition date or the viewed date in the Viewer tab.

- Recently Acquired: Lists the patients by the date of acquisition.
- Recently Viewed: Lists the patients by the viewed date in the Viewer tab.

### 2.4 List of Patients by Doctor

When selecting a doctor name, the patients assigned to the selected doctor are sorted and listed.

DOCTOR	
All	<b>^</b>
All	
Doctor A	
Doctor B	
Doctor C	
None	

- All: Lists all of the registered patients.
- A specific doctor: Lists the patients assigned to the selected doctor.
- None: Lists the patients not assigned to any doctor.

- The user can add, modify, or delete the doctor list at [Settings > Environment > General > USER ACCOUNT MANATER].
- Only the doctor names created with the doctor account are shown on the doctor list.

### 3. Editing Patient Info

#### 3.1 Registering a New Patient

1. Click the [Add Patient] icon from the toolbar. The [ADD PATIENT] window appears.

	Chart No.*	20200525_120829
рното	Name* Gender Date of Birth	Last Name First Name Male Month Day Year 2020
Doctor 1	None	Doctor 2 None
Social ID		
Phone		
Mobile		
E-Mail		
Zip Code		
Address		

- 2. Enter the patient information to the Add Patient window and click the [Add] button. The required information includes the chart number, name, and e-mail address. For other information such as the manual input of the chart number, changing the order of the name (first and last name, or vice versa) and e-mail settings can be found on '2. Setting up EzDent-i'.
- The chart number is entered automatically, but the user can edit the chart number using alphabets, number, and '\_'. If you type alphabets in lower case, they automatically change to upper case letters, and the chart name will be saved in upper case letters in DB.
- The doctor information is required when searching for patients by doctor. In case of not assigning a doctor, it is displayed as 'None'.
- The fields for the first and last name are required.
- E-mail address of the recipient is required when the Report tab sends an email. For optional information, you can add the Social ID, phone number, email, Zip code, and address.

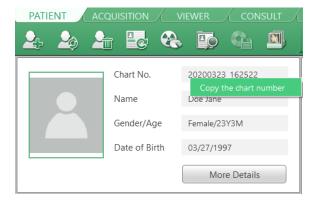

- The user can add, modify, or delete the doctor list at [Settings > Environment > General > USER ACCOUNT MANATER].
- Only the doctor names created with the doctor account are shown on the doctor list.
- 3. After the completion of this process, the patient appears in the patient search list. The patients added though the PMS linkage with EzBridge and Linkage.xml are displayed at the top of the patient list.
- When clicking [Hide the displayed patient Information], the patient information, patient list and image list displayed on screen are hidden. To set it back as before, search a patient using [Search] feature.

### 3.2 Viewing Registered Patient Information

To view the detailed information about the selected patient in the Patient Tab, click the [More Details] button. The [PATIENT INFORMATION] window appears.

			PATIENT INFORMATION				>
				Chart No.*	20200323_162522	2	
					Last Name	First Name

**3.** Modify the patient information appropriately and then click the [Modify] button. The modified patient information has been saved.

### 3.4 Deleting Patient Records

- 1. Search and select the patient data to delete from the list of search results.
- 2. Click the [Delete] icon on the toolbar. The [DELETE PATIENT] window appears. Enter the password for deleting a patient record.

	DELETE PATIENT		Х
	Chart No.	20200323_162522	
	Name	Doe Jane	
		Enter the administrator password to delete the patient. All information and image data of the patient will be deleted.	
	Password		
		OK Cancel	

3. 'Succeeded to delete' message appears and the patient record is deleted.

The initial password of EzDent-i is '0000'. The user can change the password at [Settings > Environment > General > USER ACCOUNT MANAGER].

### 4. Exporting to Acquisition Information

The information such as exposure time, kVp, mA, DAP by patient, modality, and period can be exported. The [Export to acquisition information] function allows to check the number of acquisition by modality.

1. Select the [Export to acquisition information] icon on the tool bar.

2. Select the ID and enter the password. Click the [OK] button.

Cogin Login	×

- Information that can be checked through the [Export to acquisition information] function : Chart Number, Patient name, DOB, Social ID, Doctor, Image Type, kVp, mA, DAP, Exposure time, and Date.
- The items without kVp, mA, and DAP information are displayed with the default value "0".
- DAP Sum is displayed to four decimal points and as the same value with the Excel Sum value.

### 5. Exporting Patient Information

Users can view patient information and export patient information as a .csv or .zip file.

1. Click [Export Patient Information] icon from the toolbar.

2. Enter ID and password to view patient information.

Field		Value	ſ
Last Name	Doe		
First Name	Jane		
Gender	Female		
Date of Birth	03/27/1997		
E-Mail			
Social ID			(
Phone			
Zip Code			
Address			
Mobile	010-1234-5678		
Compress to .zip file	5	Password	

3. Click [Export] button and set the path to export the patient information as a .csv file.

Checking [Compress to .zip file] allows you to [Export] all files (images, patient information) as a compressed file (.zip).

 Input a password during the [Export] process to password-protect the exported file.

### 6. Exporting

Users can export images saved in EzDent-i to their local PC or CD/DVD using [Export] icon from the toolbar.

Refer to 'Chapter 3. EzDent-i Basics > 3. EzDent-i Main Menu > 3.2 Export' for the details.

### 7. Data Group

2D and 3D images of a patient can be managed as a data group and the grouped data can be sent together to Ez3D-i.

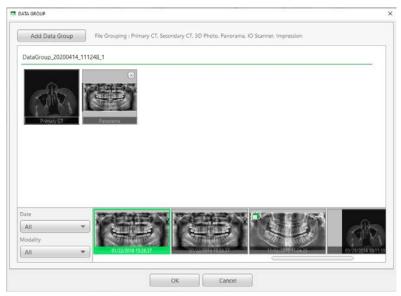

1. Select the [Data Group] icon on the tool bar.

2. The [DATA GROUP] window appears. Select the [Add Data Group] button to create a new data group.

Add Data Group	File Grouping : Primary CT, Se	condary CT. 3D Photo. Panorama.	IO Scanner, Impression	
DataGroup_20200414_1112	48_1			
SR.				
Primary CT				
Prémary CT Date All <b>v</b>	towned			60
Date			04/14/02011-14-27	

3. Drag and drop the images at the bottom of the dialog to the boxes in the data group.

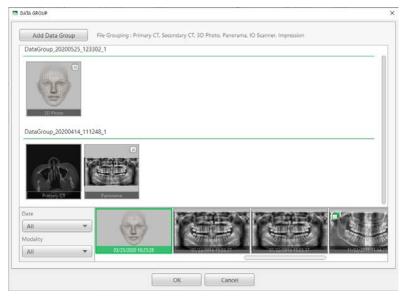

- Panorama image which is acquired with CT image is automatically allocated to the same Data Group with the CT and is unable to be deleted after automatic allocation.
- CT image already allocated as primary CT cannot be allocated as secondary CT.

 An error message occurs when the user adds more than two images with the same data type.

However, you can add more than two IO scanner images or impression images in the same data group.

4. Click the [Add Data Group] to add more data groups in the [DATA GROUP] Dialog.

- CT Image cannot be added to more than one Data Group.
- A data group will be deleted when all images included in the data group are deleted.
- 5. Click one of the CT images which is included in a data group on the Patient Tab to open the CT data with other grouped images in Ez3D-i.

### 8. Classifying Images of Registered Patients

### 8.1 Classifying Images of Registered Patients

The patient images can be sorted out by Date or by Modality.

- **1.** Search and select a patient.
- 2. Select the date or enter a period in the area of patient images. And then, the images which meet these conditions are displayed.

Search by Date

The images are listed from the recent data, and are displayed in the order of acquisition time within the list.

Search by Modality

The images are listed by modality and are displayed in the order of acquisition time within the list.

When using the IO Sensor or IO Camera option on the searching option, click the [+] button to view the numbered teeth. Select the number in the numbered teeth, the images which meet the condition displays.

T All	TOOTH NUMBER
T Panorama	
[ Cephalo

OK Cancel	OK Cancel

Double click an image to display the image on the viewer window.

 To open CT images, a 3D Image Viewer runs automatically. In case that the 3D Imaging Viewer of Vatech, Ez3D-i, is installed on the same PC, Ez3D-i is opened. Because EzDent-i is linked with Ez3D-i by default, user doesn't need to set it up in any fashion.

### 8.2 Managing Patient images

Right click on the patient image from the patient image list. A dropdown menu with your image management options will appear.

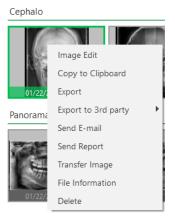

Image Edit

From here, users can calibrate, rotate or Initialize the image.

Copy to Clipboard

Users can copy the selected image to the Clipboard.

Export

Users can export images saved in EzDent-i to their local PC. For more details, user can refer to 'Chapter3. EzDent-i Basic'.

Send E-mail

The selected image is automatically attached and sent by email.

Press the <Ctrl> key on the keyboard to select multiple images to be attached.

Send Report

The selected image is automatically inserted into a Report. At this time, the images are inserted in Fit size.

Transfer Image

An image which is saved under one patient can be transferred to another patient. At this time, the acquisition date and image information (modality and position) are maintained, and the acquisition date and the image information cannot be modified. To modify the acquisition information, user should change the information directly using the Image Editor.

- 1. Right click on the desired image. The list will appear. And then, select the [Transfer Image] option.
- 2. Enter the Chart No. and Password of the patient that the transferred image of will be saved.

TRANSFER FILE	×
Please enter the chart number of the patient that you want t move the image to.	o
Chart No.	
Password	
OK Cancel	

- The initial password of EzDent-i is '0000'. The user can change the password at [Settings > Environment > General > USER ACCOUNT MANAGER].
   Press the <Ctrl> key on the keyboard to select multiple images.
- **3.** When the [MESSAGE] window appears, click the [OK] button. The Image transfer is completed.
- File Information

Users can verify the file information of the selected image.

Delete

Users can delete the selected image from the DB.

- 1. If the user wants to delete more than 2 images, hold the <Ctrl> key on the keyboard and click the desired images from patient image list, then Right Click and select Delete.
- 2. Right click on the desired image for deletion. Select [Delete] from the list menu.

**3.** When [DELETE IMAGE] window appears, enter the password and click the [OK] button. The Image Deletion is completed.

	The image you are deleting will not be restored. Are you sure you want to delete the selected image?
Password	

The initial password of EzDent-i is '0000'. The user can change the password at [Settings > Environment > General > USER ACCOUNT MANAGER].

## 9. Tools

### 9.1 Main Tools

# Chapter 5. ACQUISITION Tab

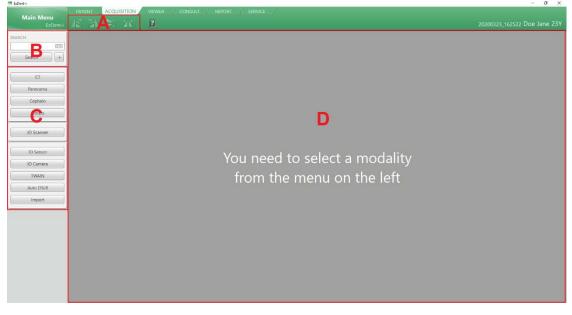

1. Configuring ACQUISITION Tab 10
2. Acquiring Images Using Extraoral X-ray System11
3. Acquiring Images Using IO Scanner11
4. Acquiring Images Using Intraoral X-ray System
5. Importing Images from Local PC to EzDent-i Server
6. Tools11

# 1. Configuring ACQUISITION Tab

The Acquisition Tab provides the function to capture images with CT, Panorama, Cephalo, IO Sensor, and IO Camera equipment. The images can be stored on the EzDent-i server. An image can be imported from the PC server or local PC and saved as a patient image.

EzDent-i supports the maximum resolution that the acquisition equipment when acquiring through dental cameras other than 2D, 3D Imaging Systems, IO Sensor, IO Camera, and Twain.

### 1.1 Workspace

- A: These buttons are for editing (rotation) for the images.
- B: Search pane is used for searching for a patient. Whatever tab the user is working on, the SEARCH pane is fixed so that the user can search for another patient at any time.
- C: The user can select the modality and import or save the images.
- D: The user can preview the captured images before saving.

# 2. Acquiring Images Using Extraoral X-ray System

To acquire images with CT, Panorama, or Cephalo acquisition equipment, EzDent-i Console should be installed, not EzDent-i Client. If it is installed properly, buttons for choosing modality type are displayed. To acquire images with the patient please see below.

1. Click the button of the desired extraoral X-ray system. The image acquisition program appears.

If you want to acquire images in the 3D Photo or Model Scan mode, click the [Others] button to display the image acquisition program.

Search +	Captors Address for \$3.5.10

Others				- HORIZONIAL POSITION
Others	Age: 25			- BANG QUALITY -
]		Please select a capture mode, and then cl	ick CONFIRM.	
IO Scanner				- HE INLARTIFACT BUDGET
				See Ack
IO Sensor	89 kVp	5.5 mA 🚔 🕺 🤅		CONTRA (BEAD

- 2. Set the image acquisition program as desired and click the [Confirm] button.
- **3.** Click the [Ready] button and take an image with the exposure switch. The captured image appears on the screen.

All the latest equipment manufactured by Vatech utilizes the image acquisition program to acquire images. Refer to the Vatech equipment manual for the user instruction and related information about the image acquisition program.

# 3. Acquiring Images Using IO Scanner

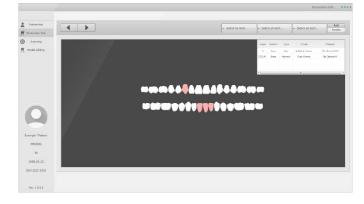

IO Scanner console program should be installed on the PC to acquire images from IO Scanner. Please refer to the manual of IO Scanner program for the user instruction and related information.

1. Click [IO Scanner] button on the Acquisition Tab.

	Search	
	ст	
	Panorama	
	Cephalo	
	Others	
_	IO Scanner	

2. The IO Scanner program starts as follows.

# 4. Acquiring Images Using Intraoral X-ray System

### 4.1 IO Sensor / IO Camera

To acquire images with IO Sensor, the IO Sensor driver should be installed on your PC. Please refer to the IO Sensor manual or IO Camera manual for more information.

1. Click the [IO Sensor] or [IO Camera] button in the ACQUISITION tab. Once the IO sensor or IO camera is connected, template where the acquired image is located is changed. The numbered teeth are displayed on the screen.

		0	0	0	0	0	0	0	0	0

- IO Sensor: It lists the IO Sensors that are currently connected. It lists up to four IO Sensors, and user can select the desired IO Sensor device.
- IO Sensor Filtering: The filtering options that the selected IO Sensor device provides can be selected. If the v6.5 or lower version of Rayence Sensor driver is installed, the device or t image processing options cannot be selected and the images cannot be acquired when two or more IO Sensor are connected to the PC.

(2) IO Camera: When acquiring images with IO Camera, EzDent-i supports the maximum resolution of the equipment.

(3) DSLR: The maximum size of DSLR images are up to 1920 X 1080 (Full HD). If a user saves image that exceeds the maximum size, the size of image will be automatically adjusted to 1920 X 1080.

3. Change the layout to capture multiple images continuously. Click the [Change Layout] button and the [CHANGE LAYOUT] window appears. Select the desired layout.

If FMX type layout is selected, user can also select the Default Sequence option. The Default Sequence option is available for both IO Sensor and IO Camera, and for only the corresponding FMX layout, the designated sequence is saved by clicking the [Store] button.

- Select [Default Sequence]: The order to locate the acquired image from IO Sensor is set by default.
- Unselect [Default Sequence]: User can define the order to locate the acquired image from IO Sensor. Click the FMX one by one. This would then become a manual selection by the User.

4. Click the [Ready] button after positioning a patient.

Ready	Capture Image From IO Sensor	
Ready	Exposing the X-ray	
Save to DB		

- By double clicking the workspace of ACQUISITION tab, EzDent-i can be ready for imaging acquisition. This has the same function as clicking the [Ready] button.
- If IO Sensor or IO Camera equipment is connected properly, the image acquisition mode is initiated
- When using the IO Sensor, shoot the x-ray using the exposure switch
- When using the IO Camera, press the capture switch to acquire image.
- When using the IO Camera, user can use the keyboard. Under the 'Main Button > Settings > Acquisition > General', set [IO Camera Acquisition Key Setting], and the user can use the keyboard to acquire IO Camera images.
- When acquiring images with IO Sensor, IO Camera, or Auto DSLR, the last acquired image appears as the first image in the FMX frame or in the Thumbnail list by default.
- 6. For a continuous capture mode, all captured images are located in the first tooth selected. Drag and drop the captured images to each proper tooth location.
- In the Teeth Mode or the FMX layout of the IO Sensor, double click the right button of the mouse for a continuous capture.
- When acquiring after setting the FMX sequence, the re-acquisition can be possible
- 7. Select images from the thumbnails, and then click the [Save to DB] button. The captured images will be stored in the DB.
- If user wants to select more than 2 images, first hold the Ctrl key on the keyboard and click the desired images displayed on thumbnail.

To change the way you store acquired images, change the option in settings. With the option, [Auto DB Save], automatically all acquired images are stored in DB.

Imaged acquired by IO Sensor are saved in DICOM file format. Importing IO Sensor images will save the image in origina file formation.

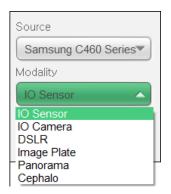

#### 4.2 Twain

TWAIN is the standard image acquisition driver that connects the image acquisition software and image acquisition devices (scanner or digital camera). For any image acquisition devices supporting TWAIN, the image acquisition through EzDent-i is possible.

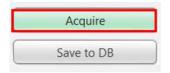

1. Click the [TWAIN] button from the Acquisition tab. The screen will change when ready for TWAIN.

SEARCH

- The TWAIN sample image above has been obtained with EzSensor, the digital IO sensor from VATECH. Please refer to the user manual of other devices using TWAIN image acquisition methods.
- If there are two or more drivers for TWAIN, the program saves the last device that a user uses.
- 5. Acquired images appear in the thumbnail list.
- 6. Select the acquired images by clicking on the thumbnails and store them to the EzDenti server. To select multiple images, select the images while holding down the Ctrl key. After selecting images, click the [Save to DB] button.

	Acquire
_	Save to DB

- If a modality changes while loading TWAIN images, only the unsaved images are moved to layout in where the modality is changed.
- The layout cannot be changed while acquiring with TWAIN if the modality is set to Ceph or Panorama.
- 7. The acquired image is normally saved to DB, a separate window appears to inform the user that the image is saved successfully.

# 5. Importing Images from Local PC to EzDent-i Server

Images already captured and saved in the local PC are imported and saved to EzDent-i for each appropriate patient.

1. Click the [Import] button from the Acquisition tab. The screen is modified to fit [Import]. Then, select the equipment type as shown below.

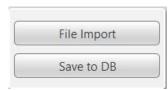

2. If needed, click the [Change Layout] button and select the desired layout. The layout is modified according to the new layout selection.

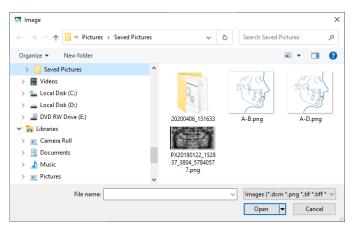

Change Layout	IO Sensor Treth Code Adult	10 Sensor Teeth Code Children		
	IO Sensor	10 Sensor	IO Sensor	IO Sensor
	10 FMX	14 FMX	16 FMX	18 FMX

For the Teeth Code layout, the "Teeth Code Adult" layout is automatically applied if the patient's age is 13 or over, and if the patient is younger than 13 years old, the "Teeth Code Children" layout is automatically applied. But if the layout is changed through the [Change Layout] button, the Teeth Code layout can be applied regardless of the age.

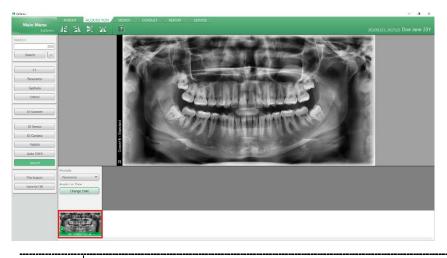

**3.** To Import the images stored in the local PC, click the [File Import] button. The [Image] window appears.

4. Select all desired images to import. If user wants to select more than 2 images, hold the <Ctrl> key on the keyboard and click the desired images.

5. Upon completion, the imported images are shown on the thumbnail filmstrip as shown below.

If there are multiple images in the FMX or Teeth Box, scroll the mouse wheel or click the left/right arrows to move between images, and the image is displayed accordingly.

To Change the acquisition date and time of the imported image, click the [Change Date] button. But, when changing dates of only two images out of five imported images, the date and time will not be applied to the three images unselected.

A deside Pass	G		Ma		2020		0

Toggle Presentation Mode(On)
Delete Overlay

- Double click the workspace. But, when other functions from tool bar other than Zooming and Panning are in use, the image cannot be viewed in Presentation Mode by double clicking the image.
- Double-click title bar of the image to change it to the maximum size in the View.
- Presentation Mode Tool Bar

When mouse is at the left side of screen or bottom side of screen, Tools or thumbnails of the slides/images are displayed.

Presentation Mode Patient Information

The at the upper-right side, can be hidden. Right click then select the [Patient Information] on the list menu.

Exiting Presentation Mode

Click the [X] button on the top right corner of the image to close the presentation mode.

# 3. Changing Layout

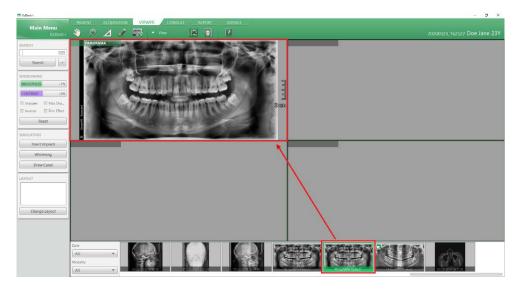

Workspace can be split, choosing one of approximately 25 supported layouts. As a result, users can view more than 2 images on a screen. This feature is named Layout.

### 3.1 Changing Layout

1. Click the [Change Layout] button. The [CHANGE LAYOUT] window appears.

		CHANGE LAYOUT				×
		Default IO Sense	r IO Camera			
		1 X 1	1 X 2	2 X 1	2 X 2	
LAYOUT		2X3	3 X 2	3 X 3	L DSLR R	
Change	: Layout	R DSLR L	1+2	2+1	SCATTER	
		Layout Manager			OK Cancel	
	If the [Change user to see th	e Layout] button do e button on the me	es not appear nu list.	, scroll the mo	ouse or click the	button for
NOTE	Main M	lenu EzDent-i				

- 2. Double click the desired layout, or select then click the [OK] button. The selected layout appears on the workspace.
- 3. Drag and drop the thumbnail image in the image view screen.

Applying multiple layouts

When searching for other patients while multiple layout is applied, the image is displayed at the first widget of the layout list.

Layout View order

Horizontal > Vertical, Left > Right, Top > Bottom

Applying SCATTER layout

Users can select the [Scatter] layout from the [CHANGE LAYOUT] window to position the images freely as desired. At this time, the patient information is not displayed on the screen. Right click the image to display the patient information.

When using the [Scatter] layout, place the mouse cursor on where the modality name is displayed and drag the images. If any opened image needs to be closed, mouse over the image and click the [X] button at top right of the image.

Applying FMX layout

When there is more than one image in each View, click the [<] or [>] button to view the previous or the next image.

Sending to Report while multiple layout is applied

If a [Send To Report] icon is clicked while multiple layout (including Bitewing layout) is applied or a certain image is displayed in full screen mode, the image is added to the report in Fit size and as viewed in the Viewer Tab.

### 3.2 Setting as Default Layout

- 1. Click the [Change Layout] button. The [CHANGE LAYOUT] window appears.
- 2. Select the desired layout, and right click to select the [Set as Default] option.

Default	10 Sensor	IO Camera				
	o Favorites Default	1 X 2	2 X 1		2 X 2	
2 X 3		3 X 2	3×3	L	DSLR	R

3. Click the [OK] button. The selected layout appears on the workspace.

### 3.3 Adding to Favorites

- 1. Click the [Change Layout] button, and the [CHANGE LAYOUT] window appears.
- **2.** Click to select a layout, and right click on the layout and then click the [Add to Favorites] option.

Default IO Sen	ior IO Camera		1
1 X 1	1 X 2	2 X Add to F	24
2 X 3	3X2	3 X 3	L DSLR R
R DSLR L	1+2	2+1	SCATTER

**3.** The star mark appears on the selected layout, and click the [OK] button. The selected layout is added to the layout list on the Control Panel.

Default IO Se	nsor IO Camera			
1 X 1	1 X 2	231	2 X 2	
2 X 3	3 X 2	3 X 3	L DSLR R	LAYOUT Frame2x1
R DSLR L	1 + 2	2+1	SCATTER	Change Layout

### 3.4 Layout Manager

The user can add new layouts or delete layouts as well as change the list shown in the [CHANGE LAYOUT] window by using the [Layout Manager] option.

- Show/Hide
  - 1. Click the [Change Layout] button, and the [CHANGE LAYOUT] window appears.
  - 2. Click the [Layout Manager] button at the bottom of window.

CHANGE LAYOUT			X
Default IO Se	nsor IO Camera		
1 X 1	1 X 2	2 X 1	2 X 2
2 X 3	3 X 2	3 X 3	L DSLR R

#### 2. Delete layout

Click the [Delete] button to remove the selected layouts from the [CHANGE LAYOUT] window.

### 4. Simulating Implant

The implant simulation can be inserted in two different methods on EzDent-i. First, user can insert the implant and locate it at the correct position manually. Second, based on length information of image, implant is selected and located at the correct position automatically.

### 4.1 Implant Insert Option: Manual/Automatic

1. Click the [Implant Insert] button from the simulation items. The [IMPLANT MANAGER] window appears.

SIMULATION	
Insert Implant	
Whitening	
Draw Canal	

2. Select the information of the implant to be inserted form the [IMPLANT MANAGER] window. Select the implant location with the corresponding tooth number. Select the implant manufacturer from the company section and the model name of the implant from the line up section. Select the correct size of the implant in the right side.

IMPLANT MANAGER							>
Crown	17         16         15           47         46         45	14 13 13 14 14 14 14 14 14 14 14 14 14 14 14 14 1	12 11 21 42 141 31 11 31	22 A 23 A 32 A 33 A	24 25 34 35	26 27 36 💦 37	×

Crown Color	White	-	Defined9	4.20	4.00	11.50	
			Defined10	4.20	4.00	13.00	
Set as defa	ult				ОК	Cancel	

- Click the [Set as default] button to change the preset implant for each tooth number.
- If company, line up and STL are empty, check if implantDB.exe has been installed on the PC.

Based on to the tooth number, specific implants (implant company, Line-Up, and Model Name, etc.) are set by default. The preset implant can be modified from [Main menu > Settings > Simulation > Preset Implant].

- **3.** If needed, click the [Crown] check box to perform the crown placement during the implant simulation.
  - If the [Crown Simulation] option is marked checked, you can also set the color of the crown to white, gold, or steel.

🗹 Implant	17 💥 16 🔔 15			22 1 23	24	26 🤾 27

Crown Color	White	-	Defined9	4.20	4.00	11.50	
			Defined10	4.20	4.00	13.00	

**4.** After the selection is done, click the [OK] button. The implant is placed in the designated location.

- Implant Automatic Insert: Implants are inserted at the specified location according to the selected tooth number.
- Implant Manual Insert: Implants are inserted at the user-selected location manually

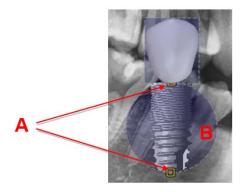

The Implant Insert method is set to Automatic by default. The method can be changed from [Settings > Simulation > Preset Implant].

5. Place the implant in the desired location by adjusting the direction of the implant and the crown size.

The following is the way to change the direction and size of impaInt.

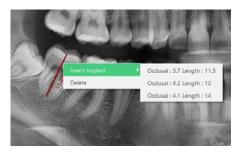

- A. When dragging the inner part of the purple circle, the position of the implant can be controlled.
- B. When dragging the small yellow box the direction of implant can be controlled.

### 4.2 Implant Insertion by Measuring Length

1. Click the [Length] icon and click two points to measure the length. The line for the measurement appears on the image and click the [Length] icon again to deselect

2. Click the measured line and right click to see list menu. Select the [Insert Implant] option from the list menu.

**3.** Three implant options are listed for the measured length. Click the desired implant option, and it will be inserted automatically.

### 4.3 Copying and Pasting Inserted Implant

1. Right click on the simulated implant and select the [Copy Implant] option.

2. Right click on the desired location and select [Paste Implant] option. Then, the implant is inserted on the selected location.

Image Edit
Copy to Clipboard
Export
Export Image with Overlay
File Information
Toggle Presentation Mode(On)
Delete Overlay

### 4.4 Modifying Inserted Implant

1. Right click on the simulated implant and select the [Property] option.

Show Implant Information
Copy Implant
Delete

2. Modify the implant information as desired in the [IMPLANT MANAGER].

The implant properties such as Company, Line-Up, model, and Item can be modified, and the [Crown Simulation] option can be also selected.

3. Click the [OK] button. Then, the modified implant appears.

#### 4.5 Inserted Implant Information

1. Right click on the simulated implant and select the [Show Implant Information] option.

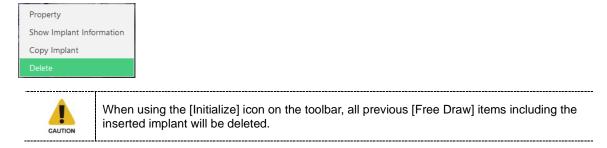

2. The implant information will be shown.

- Right click on the implant once again and select the [Hide Implant Information] option to hide the implant information.
- When you move the implant image, the information will move along with the image.

### 4.6 Deleting Inserted Implant

Right click on the implant and select the [Delete] option to remove the placed implant.

# 5. Simulating Tooth Whitening

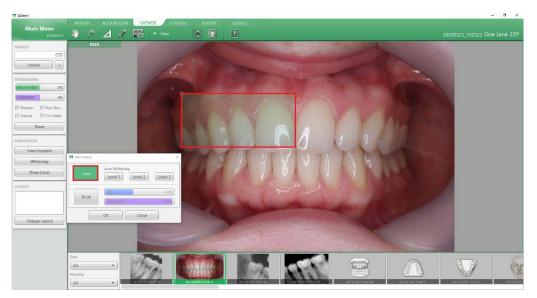

The whitening procedure can be simulated for teeth with heavy stains, from nicotine, for example. In order to use this feature, an intraoral tooth image as DSLR type must be running on the workspace.

For Simulating tooth whitening, there are two methods: The [Area] type and the [Brush] type. To begin, click the [Whitening] button. The [WHITENING] window appears.

			×
SIMULATION	Area	Auto Whitening           Level 1         Level 2	Level 3
Whitening	Brush	SIZE	40%
Draw Canal		OK Close	

### 5.1 Tooth Whitening with Area Function

1. Select the [Area] button and locate the box on the area to apply whitening. The size of the box can be adjusted freely.

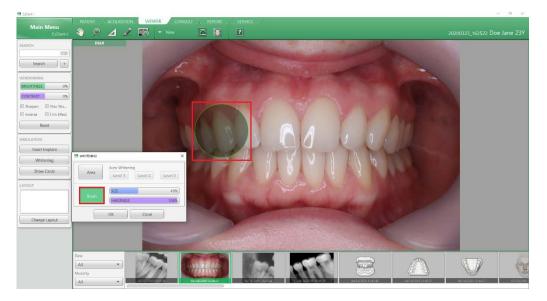

- 2. Choose [Level 1], [Level 2], or [Level 3] depending on the intensity of the desired whitening effect.
- 3. By clicking the [OK] button, the applied effect is saved in DB.

### 5.2 Tooth Whitening with Brush Function

1. Click the [Brush] button in the [WHITENING] window. The slider for the [Size] and the [Hardness] options is activated.

	WHITENING	×
SIMULATION Insert Implant	Area Auto Whitening Level 1 Level 2 Level 3	
Whitening	Brush SIZE 40%	
Draw Canal	OK Close	

- 2. Move the slider to the left and right to adjust the size and strength of the whitening brush.
- 3. Click and drag the mouse over the area to apply whitening effect. Teeth appear whiter.

4. Click [OK] button to save the change.

# 6. Drawing Nerve Canal

Prior to the implant simulation, the patient's mandibular nerve canal is usually referenced during the implant placement.

1. Calibrate the image prior to the mandible nerve canal simulation.

The image calibration method is discussed in Section 6.

2. Click the [Draw Canal] button. The shape of the mouse cursor changes to a cross.

SIMU	JLATION
	Insert Implant
	Whitening
	Draw Canal

**3.** Click to plot points along the mandibular nerve. To delete the previously plotted point, right click.

4. Double click to mark the end of the canal.

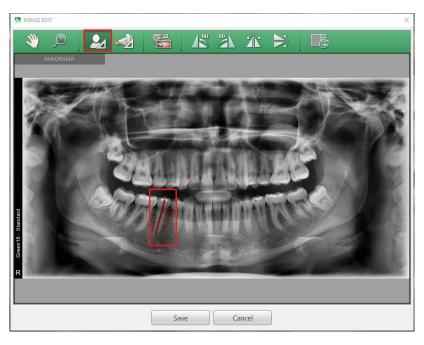

### 7. Calibration

A different measuring ratio is employed for different images and the exact length of an image is hard to measure. The image calibration allows the user to enter the exact length manually.

1. Right click on the workspace and select the [Image Edit] option.

2. On the [IMAGE EDIT] window, select the [User Calibration] icon from the toolbar. And then draw a line using [User Calibration] tool. Click the [User Calibration] icon once again to deselect.

3. Enter the actual length of the tooth and then click the [OK] button.

USER CALIBRATION		×
Measured Size	Real Size	mm
ОК	Cancel	]

After calibration, the scale appears at the right side of image. You can check whether 4. the image has been calibrated.

After the calibration, the length is measured by the newly calibrated [Length] tool.

User can input the Calibration value easily using the Calibration Preset list provided through [Calibration by Imaging Equipment] function.

3. Refer to 'Chapter 3. EzDent-i Basics' for subsequent steps.

OK

### 9. Insight Navi

Insight Navi shows multiple frames of a panorama image moving towards Anterior/Posterior direction

#### 9.1 Insight Toolbar

[Insight] toolbar on the Viewer tab is activated if the image has multi-frame images

1. Insight Navi

: Click the [Implant Insert] button from the simulation items. The [IMPLANT MANAGER] window appears.

2. Show/Hide Popup

: Show or hide popup images from the Insight Navy

3. Capture All Popup

: Capture all popup images individually.

: The popup images will be saved in the order of popup creation and each image includes its frame number. With the [Capture All Popup] button, images except popup images will be not captured.

#### 9.2 Starting Insight Navi

If the panorama image supports Insight Navi function, Insight icon is shown on the thumbnails.

Insight icon is activated only when the image includes multi-frame DICOM data.

1. Double click the image with Insight icon to present the image on the Viewer.

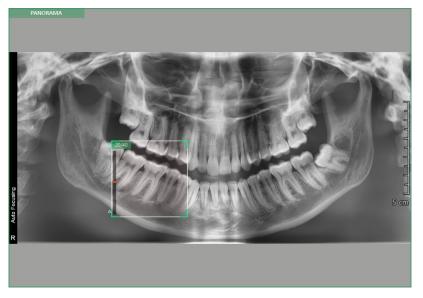

Panorama

2. Click the [Insight Navi] button to activate the Insight Navi function.

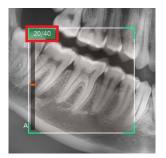

3. A square navigator will be shown where the mouse cursor is on the screen.

### 9.3 Insight Navi Configuration

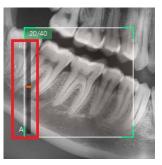

1. Frame Number

The frame number, for example, 20/40 indicates current frame/total frame.

If a panorama image includes 40 multi-frames in the image, the default frame shown in the navigator at the first time is frame #20 which is the median value.

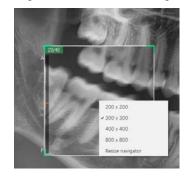

2. Position Indicator

The position indicator with is a slice bar on the left side of the navigator indicates current frame visually based on Posterior/ Anterior direction. But the slice bar cannot control the frame.

3. Change the size of navigator

Right click inside the navigator to change the size of the navigator.

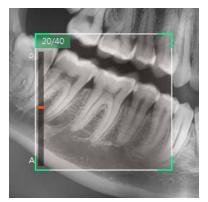

The default value of navigator size can be set at [Settings > Viewer >Tool > Insight] in the Main Menu

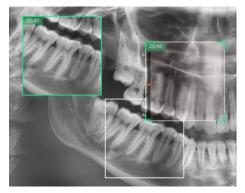

### 9.4 Insight Navi Function

1. Changing frame number

- Mouse wheel scroll up: Anterior direction
- Mouse wheel scroll down: Posterior direction
- 2. Moving Insight Navi

The navigator is created where the mouse pointer is on the image. As the mouse pointer moves, the navigator tags alone.

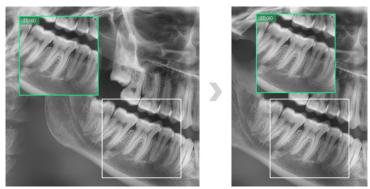

#### 3. Frame image pop-up

Click the current frame to create a pop-up image in a different window.

**4.** Moving pop-up image

The pop-up image can be moved by dragging and dropping the image.

### 9.5 Saving as IO Sensor Image

- 1. Create a pop-up image by implementing Insight NAVI.
- 2. Right-click the image and then select [Save as IO Sensor Image] from the context menu.

**3.** The [Save to IO Sensor Image] window appears as below. Select a modality, teech code, and teeth number to which the pop-up image is saved.

IO Sensor		~			
eth Code	• Adult	0 0	Child		
17         16           8         R7         86           9         47         76	15     14     13     1       R5     R4     R3     R       45     44     43     4	2 11 2 21 4 2 4 R1 2 L1 7 2 7 41 7 31 7	22     23       L2     L3       32     33	24     25     26       L4     5     6       34     35     36	27     28       4     17       4     17       5     18       5     37       37     38
		ОК	Cancel		

**4.** After selecting them, click the [Save] button, and the pop-up image will be saved to the corresponding tooth number.

### 9.6 Exiting Insight Navi

NOTE

\_\_\_

Click the [Insight Navi] button to deactivate the Insight Navi function.

### 10. Image Information

### 10.1 Adding Image Information

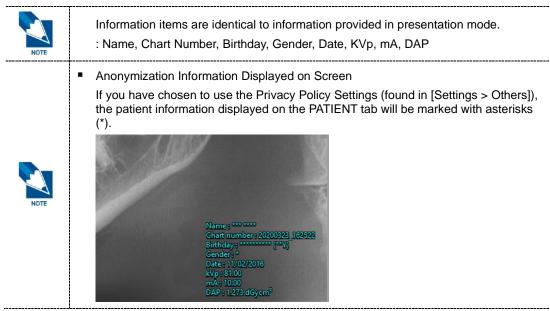

1. Click the [Image Information] button on the [Annotation] tool bar.

 The corresponding information is displayed on the top left conner. Users can move the information to desired position. Users can set the color and the size of font on [Settings] – [Viewer] – [Annotation].

**3.** To hide the image information, click the [Image Information] button again or right-click on the image information then click [hide] button from the context menu.

# Chapter 7. CONSULT Tab

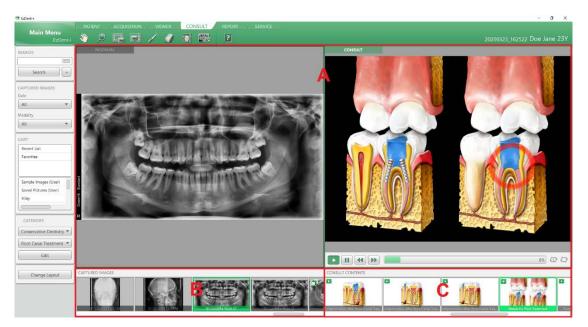

1. Configuring CONSULT Tab	157
2. The Use of Cart	158
3. Editing Cart	159
4. Searching and Playing Consultation Animations	162
5. Managing Categories	164
6. Changing Layout	171
7. Tools	172

### 1. Configuring CONSULT Tab

The Consult tab provides the necessary contents when consulting patients, and also the user can manage the contents with different categories.

EzDent-i offers features for users to add to cart, or edit or delete the consult contents.

#### 1.1 Workspace

- A: The consult contents are displayed or played on this pane. The user can drag and drop the necessary contents from the B pane.
- B: This pane shows the images for the selected patients in thumbnail.
- C: The consult contents are displayed in this pane. It shows the animated contents or image list for consulting patients.

If the operating system of user's PC is Windows 7 Edition and Media Player has not installed yet, video for consultation does not play. Visit http://windows.microsoft.com and download Media Player 12 and install it.

### 2. The Use of Cart

EzDent-i provides basic 20 consult contents. Also, user can use about 200 consult contents related to implant, periodontal disease, etc. that EzDent-i provides with fee.

CART	
Recent List	
Favorites	
	To activate the 200 Consultation animations, users can contact a customer support center of VATECH.

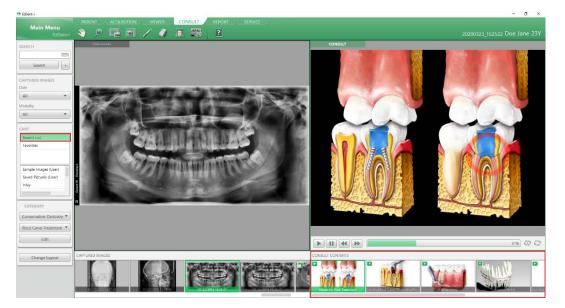

### 2.1 Favorite

NOTE

The Favorites Cart contains the consultation animations added by the user. The user's favorites and often used consultation animations can be added to this cart.

### 2.2 Recent List

The most recently used 20 consultation animations are contained to A Recent List Cart.

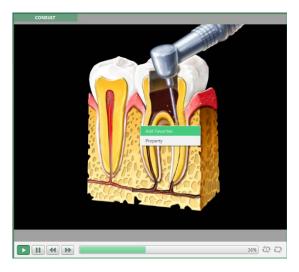

### 3. Editing Cart

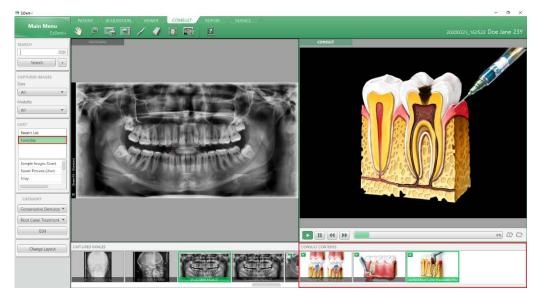

### 3.1 Adding Consultation Animations to Favorite Cart

To add the desired Consultation animations to Favorites follow the steps below.

1. Right click on the Consultation animations and the list menu appears. Select the [Add Favorites] from the list menu. Completion window will appear.

2. When user selects the [Favorites] Cart from the Cart menu, the Consultation animations added in Favorite are displayed in the Thumbnails as shown below.

### 3.2 Deleting Added Consultation Animations from Favorites Cart

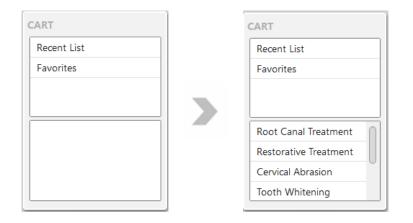

- 1. Select the [Edit] button. The [CONSULT CATEGORY] window appears.
- 2. Select the [Favorite] Category from Category list. Then, the consultation animations added to Favorite are displayed on the right.
- 3. Select a desired consultation animations by right clicking, then, list menu appears.

**3.** The selected Categories are displayed.

### 4. Searching and Playing Consultation Animations

To search and open desired consultation animations, users can select from a list.

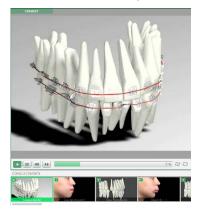

1. Click the first list located in CATEGORY. According to treatment subject, Categories are classified. If user wants to verify orthodontics, select [Orthodontics] from the first list.

2. Based on the first selection, the classified categories in detail are listed on the second list. For example, 3 categories are contained in the [Orthodontics] tab. When user selects a category on the second list, Consultation animations that are contained in the second selection are displayed in the thumbnail filmstrip.

**3.** Select and drag and drop one of the displayed consultation animations from the thumbnail filmstrip to the workspace in order to play.

4. By selecting the button below, user can play, pause, fast forward and rewind the selected Consultation animations, and repeat all consult contents or repeat the current one.

If the operating system of the PC installed for EzDent-i is Windows Vista, Consultation animations will not work normally.

### 5. Managing Categories

#### 5.1 Adding User Category

From the category, the user can add a new category, or modify or delete the added categories. Also new contents or folders can be added to the categories.

1. Click the [Edit] button. The [CONSULT CATEGORY] window appears.

CATEGORY	
Orthodontics	•
Orthodontic Diagnosis	*
Edit	

2. Click the [Add] button from the parent category to add a subcategory, which is marked with (-) mark. The [ADD CATEGORY] window appears. But the categories which have the mark, (-) can have a new category added under them.

**3.** The window appears to confirm the deletion of the selected category. Click the [OK] button to proceed with the deletion.

WARNING		×
	You can't restore a deleted category. Are you sure you want to delete it?	
	OK Cancel	

CAUTION

When the existing Category is deleted, the contents saved in that Category will be deleted.

#### 5.4 Adding Consultation Contents to Category

The user can add the images or animated contents (jpg, bmp, png, avi, wmv) or the document type of contents (doc, docx, ppt, pptx, pdf) that are saved in the PC to the category. Users can manage all the contents for Consulting with the patient in EzDent-i.

- 1. Click the [Edit] button. The [CONSULT CATEGORY] window appears.
- 2. Select the category to add a new content and click the [Add Content] button.

### 5.6 Adding Consultation Images

Users can add consulting contents to a category.

1. Right clicks on the image in the Captured image pane and select the [Add Consult Image] option. The [CONSULT CATEGORY] window appears.

2. Select the category where to add the consulting contents. Consulting contents to add will be shown in the [Preview] area.

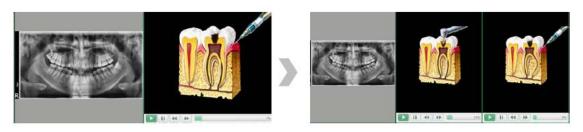

**3.** Click the [OK] button, and the content will be saved. If the image is properly saved, a completion notice window will be displayed.

SUCCESS		×
i	The content is saved successfully.	
	ОК	]

### 6. Changing Layout

Users can split the workspace to display more than 2 images or Consultation animations at once. The way to split workspace is called Layout. EzDent-i provides 9 options for its Layout.

For detailed information related with changing Layout, refer to 'Chapter 6. VIEWER Tab > 2. Changing Layout'.

## 7. Tools

2. Creating Report	176
3. Editing Report	179
4. Modifying Location and Size of Inserted Text and Patient Images	183
5. Saving and Importing Report	185
6. Exporting Report	186
7. DICOM Print	190
8. Tools	194

### 1. Configuring REPORT Tab

The Report tab helps users record and manage the diagnosis and consult results. It can also be used as a chart as it records the images and treatment history.

EzDent-i can send the report directly to the patient via email or export to a PDF file.

#### 1.1 Workspace

sin Lavent-i								D A

- A: These buttons are for inserting image/ text boxes or creating or exporting reports.
- B: The user can insert images or text to make a report.
- C: The pane includes buttons to edit report templates, change report templates or to save reports.

#### Patient Information Anonymization

If you have chosen to use the Privacy Policy Settings (found in [Settings > Others]), the patient information displayed on the PATIENT tab will be marked with asterisks (\*).

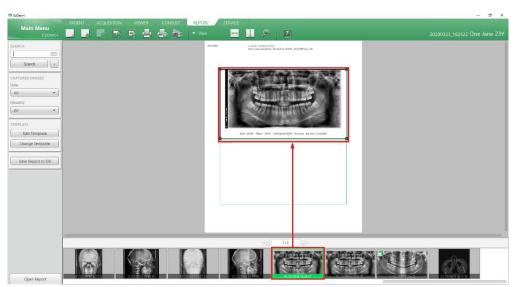

### 2. Creating Report

### 2.1 Inserting an Image Box

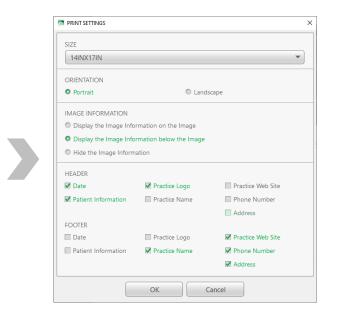

1. Drag and drop images from the image thumbnail filmstrip to the image box to insert.

The image is displayed with windowing/overlay applied in the VIEWER tab.

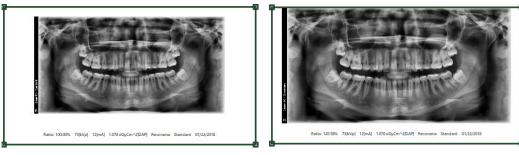

Set location of the image information with the [Print Settings] icon

------

**2.** Users can see the image in real size or adjusted to fit the window size. For the real size, the image must have a calibration value.

**Real Size** 

Fit on image box

- When the real size of image is bigger than the image box
  - Right click on the image and click the [Image Edit] menu.

On the Image Edit mode, drag the image to move and display the desired part.

Right click on the image and click the [Image Edit] menu again to close the Image Edit mode.

#### 2.2 Inserting Frequently Used Text

Frequently used text can be saved in the DB. To insert please select from the menu.

Double click the text box to type or edit the text. Use the mouse to change the text box size or to move the box.

- 1. Click [Main menu > Settings > Report > Text].
- 2. Click the [Add] button. The [ADD REPORT TEXT] window appears.

er Templ		
Show	Name	
×	RPT_Frame2x1L_trpt	

3. For default templates, [Rename] button and [Delete] button are disabled.

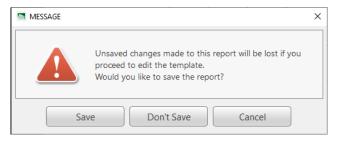

#### 3.5 Edit Report Template

The default templates provided by EzDent-i can be edited by the users.

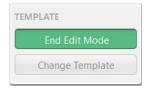

1. Click the [Edit Template] in the [TEMPLATE] option.

TEMPLATE	
Edit Template	)
Change Template	)

2. "The changes in this report will be deleted. Do you want to save this report?" message will appear. Click the [Save] button to save the report.

- **3.** Create a user template by inserting new image boxes or test boxes based on a default template.
- 4. When template editing is done, click the [End Edit Mode] button to save the edited template.

5. A message asking "Save Template?" appears, then click the [Save as] button and change the [Template Name].

MESSAGE ×	TEMPLATE NAME	$\times$
Edit Template Mode will be terminated. Do you want to save the changed template?	Template Name RPT_14FMX	
Save Save As Don't Save	OK Cancel	

When editing default templates provided by EzDent-I, the [Save] button will be disabled, so only [Save as] option is available.

# 4. Modifying Location and Size of Inserted Text and Patient Images

Users can adjust the size and location of inserted text and patient images.

#### 4.1 Grid

Users can turn the grid function on and off for exact location and size of the image box. You can edit the exact location or the size.

Grouping all objects
Ungrouping all objects
Grid On/Off

#### 4.2 Ruler

Click the empty space on the report to display or hide a ruler.

- Rulers ON for all images: Rulers on all images are hidden from the screen.
- Rulers OFF for all images: Rulers on all images appears on the screen.
- Rulers ON for some images and rulers OFF for some images: Rulers on all images are hidden from the screen.

#### 4.3 Grouping Images

On the report screen, right click and select the [Grouping all objects] option.

All notes and images can be grouped. Users can change the location and resize all grouped images at the same time.

Grouping all objects

# Chapter 9. SERVICE Tab

1. Configuring SERVICE Tab	197
2. Starting SERVICE tab	198
3. Making Order	199
4. Order Dashboard	203
5. Viewing Result	205

# 1. Configuring SERVICE Tab

Service tab is based on web service called vatech hub that provides teleradiology. vatech hub enables a user to be connected with a center. If a user request teleradiology, radiologists who have specialized knowledge interpret the image based on the registered information. Then, the user can more accurately and quickly diagnose the patient through the result (Teleradiology Reference, surgical Guide, etc).

# 2. Starting SERVICE tab

To use vatech hub connected with SERVICE tab, go to [Main Menu] – [Settings] – [Service], and set the connection.

Also, to save result received from vatech hub to EzServer, ID and PW of vatech hub should be entered in TRAgent. TRAgent is a program to receive results from vatech hub and to send them to EzServer.

1. Select the SERVICE tab, and the web view of vatech hub is displayed as shown below. Click the [Sign-in] button at the top of the screen.

 After entering Clinic/Center Email Address, User ID, and Password, click the [Sign-IN]button. If you stay signed in, select the checkbox marked as [Stay signed in]. However, if the password is changed on the website of vatech hub before executing the SERVICE tab, the function is released.

Service Hour	09:00 - 18:30	Urgent Hour 1-	4:00 - 16:30	Response Time	Within 1 hour	

Click the icon next to the center name, and you will see introduction of center. After selecting the desired center, click the [OK] button.

If you select the checkbox marked [Urgent Order], you can receive the result within the time specified by the corresponding center. However, additional cost is required.

Order File

Click the [Upload] button. Slect modality and image. If the corresponding file has been attached, the file name and the modality are displayed.

Only one modalty is selected for teleradiology order and the maximum of 10-modality is selected for dental technology order.

Patient Information

For the patient registered in EzDent-i, the patient information is automatically entered and it can be modified by user.

Patient Information Anonymization

If you have chosen to use the Privacy Policy Settings (found in [Settings > Others]), and [Service] is one of the options chosen under [Anonymize Patient Information], the patient information will be anonymized in the [Patient Information] when you click [new order]

Clinic Information

Based on the current login ID, the clinic information is automatically entered. It cannot be modified by user.

Order comment

Enter the order-related comment.

You should select the checkbox marked 'We have acquired "Consent to release personal information to third parties" from patients'.

- 4. Click the [Order] button at the bottom of the window.
- 5. A pop-up message appears as below. Click the [OK].

	$\times$
<	
Order	
Do you want to continue to order?	
OK Cancel	

6. If making the order is completed, you can check that the corresponding file is being transmitted. After that, the status of order is displayed as 'Sent'.

# 3. Adding, Modifying and Deleting FMX

To create, edit, or delete new FMX layout using VTFMXLayoutEditor, perform the following steps.

#### 3.1 Adding a New FMX

You can add a new layout, modify, and delete with the button on layout list highlighted below. The functions and directions for use are shown below.

Icons	Designation	Description of Features
+	Add layout	Creates a new layout
	Delete layout	Deletes the selected layout
	Rename layout	Modifies the selected layout name
	Copy layout	Create a new layout by copying the selected layout

- 1. Select a layout at random from the default layouts and click [Add Layout] button. The [ADD LAYOUT] window appears.
- 2. Select the file path for saving the layout, enter FMX name, and click the [OK] button.

ADD LAYOUT		×
Name :		
	ОК	Cancel

**3.** The user can make a desired layout with adding, changing direction, minimizing, and deleting the mount.

Icons	Designation Description of Feature		
<b>4</b>	Add horizontal mount	Adds long horizontal rectangle	
<b>P</b> +	Add vertical mount	Adds long vertical rectangle	
C	Rotate to left 90 degree	Changes mount direction to left	
C	Rotate to right 90 degree	Changes mount direction to right	
	Magnify mount size	Magnifies the size of total Layout	
	Reduce mount size	Reduces the size of the total Layout	
	Delete selected mount	Deletes the selected mount	

Icons	Designation	Description of Features
Show Grid	Move mount by Grid	Show/High of Grid
✓ Snap to Grid	Snap to Grid	Moves mount adjusting to Grid paper

What is a mount?

Each of the boxes consisting of FMX layout is called as a mount.

4. Double click the mount to designate the tooth number in the mount. Select the tooth number and click the [OK] button in the [DIALOG] window.

Please refer to Chapter 1. installation for ImplantDB Editor installation.

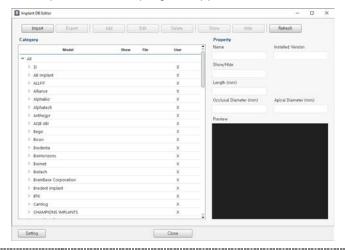

## 2. Starting ImplantDB Editor

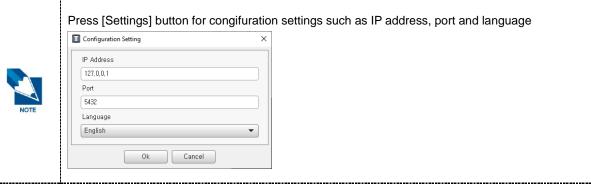

Run ImplantDB Editoras the following steps.

- 1. Press the window start menu to activate program search window.
- 2. Go to VATECH folder and run the VTImplantDBEditor.

🐌 VATECH
🛃 VTDBBackup
VTFileManager
VTImplantDBEditor
VTPatchManager

#### 3. ImplantDB Editor program appears.

# 3. Using ImplantDB Editor

#### 3.1 Adding ImplantDB

- Adding Company
  - 1. Click the top rank category, [All], to activate [Add] button.

Import	Export	Add	Edit	Deleta	Show Hide	Retresh
Category					Property	
	Model	Show	File	User	Name	Installed Version
¥ All						
> 3i				x	Show/Hide	
> AB implan				х		
> ALLFIT				×	Length (mm)	

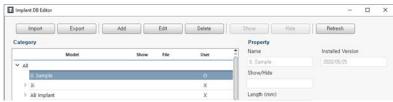

2. Select [Add] button, type Company Name and clinck [Ok] button.

I Add Company	×
Company Name	
Ok Cancel	

3. The company name is added to the list.

Implant DB Ed	litor				
Import	Export	Add Edit	Delete	Show Hide	Refresh
ategory				Property	
	Model	Show File	User	Name	Installed Version
¥ All			100000	0, Sample	2020/05/25
0. San	nple		0	Show/Hide	
> 3i			×		
> AB Im	plant		×	Length (mm)	

- Adding Line-up
  - 1. Click the company name to add a new line-up to.

2. Select [Add] button, type Company Name and clinck [Ok] button.

Add Line-up	×
Company Name	
0, Sample	
Line-up Name	
Ok Cancel	

3. The line-up is added to the list.

Import	Export	Add	Edit	Delete	Show Hide	Refresh
Category					Property	
	Model	Show	File	User	Name	Installed Version
¥ All		500 B 000			Sample	2020/05/25
♥ 0. Sample				0	Show/Hide	
Sample		0		0	Show	
> 3i				х	Length (mm)	

#### Adding Implant Model

CAUTION

Users can only add implant models that received 510K clearance from FDA. It is the user's responsibility to check the implant models provided by manufacturers and to use models that are already prooved safe for the safety of patients.

1. Click the line-up name to add a new implant model to.

Import	Export	Add	Edit	Delete	Show	Hide	Refresh		
Category					Property				
	Model	Show	File	User	Name		Installed Version	0	
✓ All	101.00 × 44.5				Sample		2020/05/25		
♥ 0. Sample				0	Show/Hid	e			
Sample	n:	0		0	Show				
> 3i				x	Length (m	im)			

2. Select [Add] button and type Model Name.

I Add Model	>
Company	Line-up
0, Sample	Sample
Model Name	
Import STL File	
Length	Occlusal Diameter
10,00 mm	4.00 mm
Apical Diameter	
3,00 mm	
	OK Cancel

- 3. Click [...] next to Import STL File option to import the desired STL file.
- 4. Click [OK], then the selected STL will be added to the list of the parent line-up and company.

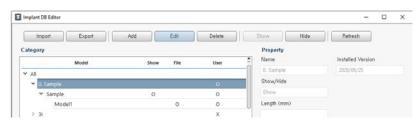

Implant DB Editor							- 0
Import	Esport	Add	Edit	Deloto	Show	Hide	Refresh

# Chapter 12. TRAgent

1. Using TRAgent ...... 231

# 1. Using TRAgent

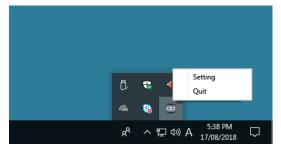

TRAgent is a program that receives the reading result from vatech hub and sends it to EzServer.

#### 1.1 Starting TRAgent

TRAgent is automatically executed when your PC is started.

#### 1.2 Exiting TRAgent

Click the TRAgent tray icon, and its context menu will appear. Click [Quit].

#### 1.3 Setting

Click the TRAgent tray icon, and its context menu will appear. Click [Setting].

TRAgent Setting	?	$\times$
vatech hub       URL       Clinic Email Address (Account Mail         https://api,vatech-hub.com       Interpretent of the system of the syste	anager)	
Close		

 vatech hub: Input the URL and the user's account information and click on [Test] to check the connection.
